# Geek Survival 101

## How to change the default browser Linux

For solving this problem, you have to change the ***mimeapps.list*** stored in \*\*\* cg~/.config/\*\*\* gc, so that all the previous default browser its substituted with the new one.

Also, it is important to change the ***~/.profile*** file, so the environment variable ***$BROWSER*** stores the new default one, and if you are using *i3*, you should change the browser shortcut.

## Cheatlist

### I3

Here I will write the commands most usefull commands, in order to don't forget them: * Mod + Enter -> create Terminal * Mod + Shift + q -> Kill programm * Mod + d -> Command execution menu * Mod + Shift + g -> gaps menu * Mod + s -> Change layout stacking * Mod + w -> Change layout tabbed * Mod + e -> Change layout toggle split * Mod + F2 -> Open Firefox * Mod + Ctrl + b -> Load bmenu * Mod + z -> Open Quick Menu * Mod + 0 -> Login/Power Menu * Mod + Shift + Space -> Change Floating Mode for a screen * Mod + Shift + p -> Make screenshots of a selected area
